

## Gliders for Securope horizontal/inclined

Coulisseaux pour Securope horizontal / incliné  
Carros para Securope horizontal / inclinado  
Seilgleiter für horizontale / geneigte Securope

Code N° LDV001 - LDV075 - LDV060 - LDV111 - LDV133

# FALLPROTEC

July 2017

## Description

The glider connects the user to the SecuRope Lifeline. It slides along the cable as the user walks parallel thereto and passes easily through the intermediate anchors.

Thanks to this, the user does not need to remain close to the lifeline.

## Advantages

- Intuitive use
- Ergonomic: smooth passing of the anchors
- Robust and lasting material in stainless steel
- Broad range of products, covering every configuration (floor, wall, ceiling, slope...)

## Technical specifications

Delivered with an installer and user manual

Material: Stainless Steel AISI401, AISI304 & AISI17.4PH

Compliant with EN795: 2012  
Type C and CEN/TS16415:2013  
MADE IN EU

---

## Code N° LDV060

The LDV060 glider is permanently installed on the cable. It is used in an overhead configuration when the walkway is at a distance of 2,5m or less from the line.

---

## Code N° LDV133

LDV133 glider for overhead lifeline. To be installed in combination with intermediate anchor NEO LDV043 and bracket LDV134. The use of a safety block or lanyard is mandatory.

---

## Code N° LDV075

Fall arrest ZIP! for inclined lifeline 30°-90°.  
The LDV075 glider is used on sloped section. The glider is engaged on the line at the bottom end.
