

## Description

The SafeAccess rail is used in height access systems for façade cleaning and maintenance. It can be installed during the construction or on existing buildings, on façades as well as in an overhead configuration.

Compliant with EN 1808:2015  
Made in EU

## Advantages

- Most efficient system in terms of operational costs
- Bespoke system, fitting your building. Our engineering department accompanies you for setting up the equipment
- Bendable on demand (minimal radius of 600mm)
- Low weight (5kg/m) and maximum inertia
- Compatible with any type of architecture with a height between 5 and 250m
- Compatible with rope access technicians, RopeClimber, cradles and travelling ladders

## Technical specifications

Delivered with an installer and user manual

---

### MHS059 powder coated

- Keeps a homogenous colour when bended
- The powder coating is suitable for marine environments. Qualicoat specifications class 1 category 3.
- Possibility to supply special colours for quantities above 500 meters

### MHS059 anodized

- High resistance to abrasion
- Resisting sea side
